Applied Ontology Engineering in Cloud Services, Networks and Management Systems Martin Serrano

Metadata standards in today's ICT sector are proliferating at unprecedented levels, while automated information management systems collect and process exponentially increasing quantities of data. With interoperability and knowledge exchange identified as a core challenge in the sector, this book examines the role ontology engineering can play in providing solutions to the problems of information interoperability and linked data. At the same time as introducing basic concepts of ontology engineering, the book discusses methodological approaches to formal representation of data and information models, thus facilitating information interoperability between heterogeneous, complex and distributed communication systems. In doing so, the text advocates the advantages of using ontology engineering in telecommunications systems. In addition, it offers a wealth of guidance and best-practice techniques for instances in which ontology engineering is applied in cloud services, computer networks and management systems.

Engineering and computer science professionals (infrastructure architects, software developers, service designers, infrastructure operators, engineers, etc.) are today confronted as never before with the challenge of convergence in software solutions and technology. This book will help them respond creatively to what is sure to be a period of rapid development.

From reader reviews:

William Phillips:

What do you consider book? It is just for students because they are still students or that for all people in the world, what the best subject for that? Merely you can be answered for that concern above. Every person has different personality and hobby for each other. Don't to be obligated someone or something that they don't wish do that. You must know how great and also important the book Applied Ontology Engineering in Cloud Services, Networks and Management Systems. All type of book would you see on many methods. You can look for the internet solutions or other social media.

Susan Gagnon:

Information is provisions for anyone to get better life, information currently can get by anyone from everywhere. The information can be a knowledge or any news even a huge concern. What people must be consider while those information which is from the former life are challenging be find than now is taking seriously which one is appropriate to believe or which one often the resource are convinced. If you get the unstable resource then you have it as your main information you will see huge disadvantage for you. All of those possibilities will not happen within you if you take Applied Ontology Engineering in Cloud Services, Networks and Management Systems as your daily resource information.

Gary Farrell:

A lot of publication has printed but it is different. You can get it by online on social media. You can choose the top book for you, science, witty, novel, or whatever through searching from it. It is named of book Applied Ontology Engineering in Cloud Services, Networks and Management Systems. You can contribute your knowledge by it. Without departing the printed book, it could possibly add your knowledge and make you happier to read. It is most critical that, you must aware about book. It can bring you from one destination for a other place.

William Davis:

What is your hobby? Have you heard which question when you got students? We believe that that problem was given by teacher to the students. Many kinds of hobby, Everybody has different hobby. And you also know that little person including reading or as reading become their hobby. You should know that reading is very important and also book as to be the thing. Book is important thing to incorporate you knowledge, except your current teacher or lecturer. You see good news or update with regards to something by book. Different categories of books that can you go onto be your object. One of them are these claims Applied Ontology Engineering in Cloud Services, Networks and Management Systems.
