Serial-Data Computation (The Springer International Series in Engineering and Computer Science)

Stewart G. Smith, Peter B. Denyer

This book is concerned with advances in serial-data computational architectures, and the CAD tools for their implementation in silicon. The bit-serial tradition at Edinburgh University (EU) stretches back some 6 years to the conception of the FIRST silicon compiler. FIRST owes much of its inspiration to Dick Lyon, then at Xerox PARC, who proposed a 'structured-design' methodology for construction of signal processing systems from bit-serial building blocks. Based on an nMOS cell-library, FIRST automates much of Lyon's physical design process. More recently, we began to feel that FIRST should be able to exploit more modern technologies. Before this could be achieved, we were faced with a massive manual re-design task, i. e. the porting of FIRST cell-library to a new technology. As it was to avoid such tasks that FIRST was conceived in the first place, we decided to move the level of user-specification much nearer to the silicon level (while still hiding details of transistor circuit design, place and route etc. , from the user), and by so doing, enable the specification of more functionally powerful libraries in technology-free form. The results of this work are in evidence as advances in serial-data design techniques, and the SECOND silicon compiler, introduced later in this book. These achievements could not have been accomplished without help from various sources. We take this opportunity to thank Profs.

From reader reviews:

Christy Dennie:

Book is to be different for each and every grade. Book for children until finally adult are different content. We all know that that book is very important for us. The book Serial-Data Computation (The Springer International Series in Engineering and Computer Science) seemed to be making you to know about other know-how and of course you can take more information. It is rather advantages for you. The publication Serial-Data Computation (The Springer International Series in Engineering and Computer Science) is not only giving you a lot more new information but also to become your friend when you really feel bored. You can spend your own spend time to read your reserve. Try to make relationship together with the book Serial-Data Computation (The Springer International Series in Engineering and Computer Science). You never sense lose out for everything when you read some books.

Willie Adams:

The actual book Serial-Data Computation (The Springer International Series in Engineering and Computer Science) will bring that you the new experience of reading some sort of book. The author style to clarify the idea is very unique. When you try to find new book to see, this book very suited to you. The book Serial-Data Computation (The Springer International Series in Engineering and Computer Science) is much recommended to you to read. You can also get the e-book through the official web site, so you can quickly to read the book.

Gloria Castaldo:

Are you kind of stressful person, only have 10 as well as 15 minute in your moment to upgrading your mind talent or thinking skill actually analytical thinking? Then you are experiencing problem with the book than can satisfy your limited time to read it because this all time you only find publication that need more time to be examine. Serial-Data Computation (The Springer International Series in Engineering and Computer Science) can be your answer because it can be read by you actually who have those short free time problems.

Joseph Langley:

That guide can make you to feel relax. This kind of book Serial-Data Computation (The Springer International Series in Engineering and Computer Science) was colourful and of course has pictures on the website. As we know that book Serial-Data Computation (The Springer International Series in Engineering and Computer Science) has many kinds or genre. Start from kids until youngsters. For example Naruto or Private investigator Conan you can read and feel that you are the character on there. Therefore not at all of book usually are make you bored, any it offers you feel happy, fun and chill out. Try to choose the best book to suit your needs and try to like reading in which.
