Comprehensive Organometallic Chemistry III: Volume 3: Groups 13-15

This volume reviews the preparation, properties, reactions and special applications of Boron, Aluminum, Gallium, Indium, Thallium, Silicon, Germanium, Tin, Lead, Arsenic, Antimony, and Bismuth organometallic compounds. Each chapter examines the complexes formed between the metals and specific ligands and where relevant important applications of these compounds. It provides a clear and comprehensive overview of developments since 1993 and attempts to predict trends in the field over the next ten years. Like its predecessors, COMC (1982) and COMC-II (1995), this new work is the essential reference text for any chemist or technologist who needs to use or apply organometallic compounds.

* valuable content available May 2009 as an individual volume * separate volumes will appeal to a wider chemistry and materials science audience * priced for individual researcher as well as library purchase
