## Handbook of Biochemistry and Molecular Biology, Fourth Edition

- Edited by renowned protein scientist and bestselling author Roger L. Lundblad, with the assistance of Fiona M. Macdonald of CRC Press, this fourth edition of the **Handbook of Biochemistry and Molecular Biology** represents a dramatic revision — the first in two decades — of one of biochemistry's most referenced works. This edition gathers a wealth of information not easily obtained, including information not found on the web.

Offering a molecular perspective not available 20 years ago, it provides physical and chemical data on proteins, nucleic acids, lipids, and carbohydrates. Presented in an organized, concise, and simple-to-use format, this popular reference allows quick access to the most frequently used data. Covering a wide range of topics, from classical biochemistry to proteomics and genomics, it also details the properties of commonly used biochemicals, laboratory solvents, and reagents.

*Just a small sampling of the wealth of information found inside the handbook:*

- Buffers and buffer solutions
- Heat capacities and combustion levels
- Reagents for the chemical modification of proteins
- Comprehensive classification system for lipids
- Biological characteristics of vitamins
- A huge variety of UV data
- Recommendations for nomenclature and tables in biochemical thermodynamics
- Guidelines for NMR measurements for determination of high and low  $pK_a$  values
- Viscosity and density tables
- Chemical and physical properties of various commercial plastics
- Generic source-based nomenclature for polymers
- Therapeutic enzymes
